EDUCATION

Brigham Young University — Provo, UT Dec. 2026
B.S. in Computer Science, Minor in History | GPA: 3.98/4.0 | U.S. Citizen | Available full-time January 2027

EXPERIENCE

Pension Assurance LLP June 2026–Present
IT & Automation Intern

- Built Python tools (Flask, Excel add-in, OCR, Smartsheet API) that turn SOC 1 reports into filled review workpapers and automate CPE tracking and proposals, cutting up to 2 hours per report
- Planned and integrated AI and LLM solutions, including the Claude API, for administrative workflows, delivering rapid working demos and presenting each stage to firm partners and technical directors

Brigham Young University Law School May 2025–Present
Frontend Web Developer

- Migrated two production React apps to Svelte on a 6-person team, using agentic AI tooling (Claude Code) to cut code complexity
- Maintained both apps on AWS (ECS, S3, Route 53, CloudWatch) and developed against a MySQL database in Docker, shipping features to 500+ users with the backend team
- Reduced manual data entry by building user lookup and input validation into internal data-management applications

Brigham Young University Continuing Education Sept. 2024–May 2025
Quality Assurance & Course Support Specialist

- Performed quality assurance on 150+ online courses and migrated 450+ courses to an AI-driven exam proctoring system in a multi-month team project

PROJECTS — more at ryanjrusson.com

Astrolabe — Astronomy Planner Personal Project
astrolabe.ryanjrusson.com

- Built a full-stack astronomy planner (Python/FastAPI, React/TypeScript) that merges weather, light-pollution, terrain and JPL ephemeris data into nightly observing scores, ranked targets, and an interactive sky chart

History Trivia Quiz Website Personal Project
norhog.com

- Built a full-stack React/Express/MongoDB quiz site on AWS with live WebSocket leaderboards and role-based auth, deployed via GitHub Actions CI/CD with OIDC and automated rollback

Ethernet Switch & IP Router Fall 2026
Computer Networking (CS 460)

- Implemented a learning Ethernet switch (per-VLAN MAC tables, 802.1Q trunk tagging) and an IP host and router (ARP resolution, longest-prefix-match forwarding) in Python, verified in an emulated multi-host network

Systems Programming in C on Linux Winter 2026
Academic project

- Wrote a Linux shell in C with pipelines, I/O redirection, signal handling and job control (fork/execve, pipes, dup2)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C, C++, Java, SQL

Web: React, Svelte, Node.js/Express, FastAPI, REST APIs, MongoDB, WebSockets, MySQL

Cloud & tools: AWS (ECS, S3, Route 53, CloudWatch), Docker, GitHub Actions CI/CD, Git, Linux

AI: Claude API, Claude Code, LLM integration

Interests: History, Geography, Astronomy, Piano, Trumpet, Reading
